British & Turkish Citizen

+90 541 314 7898

Istanbul, Turkey

Full-Stack Developer with expertise in TypeScript, React, Vue, Node, Bun, and Laravel. Specializing in building scalable, maintainable, and consistent full-stack applications. Experienced in building RESTful APIs and robust backend services. Capable of managing scalable project architectures and working with microservices.

Tech Stack

Front-end Technologies

TypeScript Javascript React Next Vue Nuxt Ionic

Back-end Technologies

Node Bun Express PHP Laravel Sql MongoDB Traefik

Tools

Linux Docker Git Firebase AWS OpenAPI

Skills

OOP & Component Based Programming

Unit & ES2 Testing (Vitest / Cypress)

API-Driven Software

Design Systems & User Experience

State Management

User Experience Design

Hybrid Mobile Application Development

Experience

Dedecta | Lead Frontend Developer

09/2024 - Present

I rebuilt the company's social media analysis platform from the ground up, implementing modern tools and best practices. This resulted in improved code maintainability and increased iteration/development speed.

- Significant improvement in user engagement was achieved by developing advanced front-end features such as interactive charting, real-time data mapping and dynamic PDF reports.
- In collaboration with cross-functional teams, integrated external microservices and APIs to ensure seamless data flow, system scalability, and efficient third-party interactions.

Reachin | Co-Founder & Full Stack Developer

06/2023 - 06/2024

Developed and designed an MVP, which allowed the startup to show investors a working product. The prototype was essential for validating the business model and raising funds as a proof of concept.

- Utilizing Capacitor, I designed and developed a hybrid mobile application for iOS and Android, along with building a RESTful API back-end service via Laravel and Database with PostgreSQL
- Built a Single Page Application (SPA) using Inertia.js and React for various internal business operations such as order management, CRM features, monitoring email communications, and app notifications.

Brickhunter | Full-stack Developer

05/2022 - 01/2024

I joined the team to refactor an old codebase and transition the business to an e-commerce model from a service-based model.

- The codebase was refactored into a more maintainable and modern version, resulting in faster page load times and better SEO.
- Enhanced customer onboarding on service-based services using Laravel, Vue, and Livewire, as well as building a full-featured e-commerce module.
- Storyblok was integrated to make it easier for the marketing team to manage web content for the company.

Experience **Universal Packing S.** | Full-stack Developer 02/2020 - 03/2022

I was responsible for developing a suite of applications to optimize the company's operations and improve customer service.

- Implemented CRM, invoicing, workload automation, and delivery route optimization using Vue.js and Laravel. Develop a mobile application for couriers with real-time tracking and management features, optimizing delivery processes dramatically.
- Built a small KIOSK application for box makers to improve work process and task management, with automated PDF generation and printing.

Okami Creative | Co-Founder & Developer 07/2016 - 10/2019

Founded a small company at age 19 that offered software and design services to businesses. From e-commerce to landing pages to CRM, we have developed multiple interactive applications.

- Developed an application to track valet parking, automating customer and business metrics, which significantly improved operational efficiency.
- Built and maintained documented front-end UI libraries via Vue.js and React.js, ensuring code consistency and accelerating project timelines for development teams.
